

THIRUMOORTHY K

Cybersecurity Student | Aspiring SOC Analyst

thirukrish234@gmail.com | linkedin.com/in/thiruk234 | github.com/thiru011

Objective

Cybersecurity student specializing in SOC operations and threat detection. Built a Splunk-based SIEM lab to detect brute-force attacks (MITRE ATT&CK T1110) using simulated Kali Linux traffic, and an automated pipeline that pulls live IOCs from URLhaus and AlienVault OTX. Hands-on with Wireshark, Nmap, Metasploit, and Burp Suite through PortSwigger and LetsDefend labs. Seeking an entry-level SOC Analyst role to apply log analysis and threat-detection skills in a live security operations environment.

Skills

- **Technical Tools:** Splunk, Wazuh, Wireshark, Nmap, Metasploit, Burp Suite
- **Frameworks:** MITRE ATT&CK, Cyber Kill Chain, SOC Alert Investigation, Threat Detection
- **Soft Skills:** Analytical Thinking, Attention to Detail, Communication, Problem Solving

Education

Bachelor of Engineering in Computer Science & Engineering (Cybersecurity)

2023 – 2027

Dr. Mahalingam College of Engineering and Technology, Pollachi. CGPA: 8.2.

HSC | Vidhya Vikas Matric Hr. Sec. School, Uthangarai

Mar 2023

Percentage: 91%

SSLC | Vidhya Vikas Matric Hr. Sec. School, Uthangarai.

Mar 2021

Projects

SOC Detection Lab – Brute Force Attack Detection

Jan 2025

- Built a SIEM lab using Splunk to monitor and analyze authentication logs in real time.
- Developed SPL (Splunk Processing Language) queries to detect suspicious login attempts and flag anomalies.
- Mapped the attack pattern to MITRE ATT&CK framework technique T1110 (Brute Force).

GitHub: <https://github.com/thiru011/SOC-Detection-Lab>

Automated Cyber Threat Intelligence Pipeline

2025

- Automated collection of IOCs (malicious IPs, domains, hashes) from URLhaus and AlienVault OTX threat feeds.

- Detected port scans (MITRE T1046) and brute-force attempts (MITRE T1110) from live traffic data.
- Analyzed DNS queries and ICMP traffic to flag anomalous network behavior.

GitHub: github.com/thiru011/threat-intelligence-pipeline

- Completed PortSwigger labs covering XSS, SQL Injection, and authentication flaws.
- Practiced live SOC alert investigations and triage workflows on the LetsDefend platform.

Internship

Cybersecurity Intern — Codec Technology (Online)

2024

- Completed structured training in core cybersecurity concepts, threat categories, and industry best practices relevant to risk and compliance.
- Studied real-world vulnerability and attack scenarios to build foundational understanding of control weaknesses and organizational risk.
- Studied real-world vulnerability and attack scenarios to build foundational security principles.

Certifications

- **EC-Council** – Certified SOC Analyst [CSA](Currently Pursuing).
- **ISC2** – Security Principles, Access Control Concepts (Course Completion).
- **LetsDefend** – SOC Fundamentals, How to investigate SIEM alert, SOC member, Incident Handler, Phishing expert
- **Cisco** – Networking Basics, Intro to CyberSecurity (Course Completion). • **Hexcamp** – Splunk SIEM Challenge

Achievements:

- Successfully completed 25+ TryHackMe labs, strengthening practical skills in Networking, Linux, Web Application Security, the Junior Security Analyst Path, and CEH-related concepts.
- Completed 35+ PortSwigger Web Security Academy labs, gaining hands-on experience in web application penetration testing, automated vulnerability scanning, and manual security testing.
- Secured 3rd Place in the TECHNOFETE Intra-College Cybersecurity Competition (Sea of Thieves Challenge), demonstrating strong problem-solving and cybersecurity skills.
